

# Matplotlib

---

This serves as a cheat sheet for Matplotlib, a 2d plotting library for Python.

Not a total beginner? Jump straight down to the [examples](#) or get the [jupyter notebook file](#). Also, the official [example library](#) is pretty sweet.

## Index

## 1. Prepare Data

---

NumPy is probably your best friend for that. Check out my CheatSheet [here](#)

## 2. Plots

---

# Creating plots

## Figure

Operator	Description	Documentation
<code>fig = plt.figure()</code>	a container that contains all plot elements	<a href="#">link</a>

## Axes

Operator	Description	Documentation
<code>fig.add_axes()</code> <code>a = fig.add_subplot(222)</code>	Initializes subplot A subplot is an axes on a grid system row-col-num, see <a href="#">examples</a>	<a href="#">link</a> <a href="#">link</a>
<code>fig, b = plt.subplots(nrows=3, nclos=2)</code>	Adds subplot	<a href="#">link</a>
<code>ax = plt.subplots(2, 2)</code>	Creates subplot	<a href="#">link</a>

Axes are very useful for subplots. See example [here](#)

After configuring your plot, you must use `plt.show()` to make it visible

# Plotting

## 1D Data

Operator	Description	Documentation
<code>lines = plt.plot(x,y)</code>	Plot data connected by lines	<a href="#">link</a>
<code>plt.scatter(x,y)</code>	Creates a scatterplot, unconnected data points	<a href="#">link</a>
<code>plt.bar(xvalue, data , width,</code>	simple vertical	<a href="#">link</a>

<code>color...)</code>	bar chart	<a href="#">link</a>	
<code>plt.barh(yvalue, data, width, color...)</code>	simple horizontal bar	<a href="#">link</a>	
<code>plt.hist(x, y)</code>	Plots a histogram	<a href="#">link</a>	
<code>plt.boxplot(x,y)</code>	Box and Whisker plot		<a href="#">link</a>
<code>plt.violinplot(x, y)</code>	Creates violin plot	<a href="#">link</a>	
<code>ax.fill(x, y, color='lightblue')</code> <code>ax.fill_between(x,y,color='yellow')</code>	Fill area under/between plots	<a href="#">link</a>	

For more advanced box plots, start [here](#)

### 2D Data

Operator	Description	Documentation
<code>fig, ax = plt.subplots()</code> <code>im = ax.imshow(img, cmap, vmin...)</code>	Colormapped or RGB arrays	<a href="#">link</a>

Suggestions?

### Saving plots

Operator	Description	Documentation
<code>plt.savefig('pic.png')</code>	Saves plot/figure to image	<a href="#">link</a>
<code>plt.savefig('transparentback.png')</code>	Saves transparent plot/figure to image	see above

## Customization

### Color

--	--	--

Operator	Description	Documentation
<code>plt.plot(x, y, color='lightblue')</code> <code>plt.plot(x, y, alpha = 0.4)</code>	colors plot to color blue	<a href="#">link</a>
<code>plt.colorbar(mappable, orientation='horizontal')</code>	<code>mappable</code> : the Image, Contourset etc to which colorbar applies	<a href="#">link</a>

Markers (see [examples](#))

Operator	Description	Documentation
<code>plt.plot(x, y, marker='*')</code>	adds <code>*</code> for every data point	<a href="#">link</a>
<code>plt.scatter(x, y, marker='.')</code>	adds <code>.</code> for every data point	see above

Lines

Operator	Description	Documentation
<code>plt.plot(x, y, linewidth=2)</code>	Sets line width	<a href="#">link</a>
<code>plt.plot(x, y, ls='solid')</code>	Sets linestyle, <code>ls</code> can be ommitted, see 2 below	see above
<code>plt.plot(x, y, ls='--')</code>	Sets linestyle, <code>ls</code> can be ommitted, see below	see above
<code>plt.plot(x,y,'--', x**2, y**2, '-.')</code>	Lines are '--' and '-.', see <a href="#">example</a>	see above
<code>plt.setp(lines,color='red',linewidth=2)</code>	Sets properties of plot <code>lines</code>	<a href="#">link</a>

Text

--	--	--

Operator	Description	Documentation
<code>plt.text(1, 1, 'Example Text', style='italic')</code>	Places text at coordinates 1/1	<a href="#">link</a>
<code>ax.annotate('some annotation', xy=(10, 10))</code>	Annotate the point with coordinates <code>xy</code> with text <code>s</code>	<a href="#">link</a>
<code>plt.title(r'\$\delta_i=20\$', fontsize=10)</code>	Mathtext	<a href="#">link</a>

## Limits, Legends/Labels , Layout

### Limits

Operator	Description	Documentation
<code>plt.xlim(0, 7)</code>	Sets x-axis to display 0 - 7	<a href="#">link</a>
<code>plt.ylim(-0.5, 9)</code>	Sets y-axis to display -0.5 - 9	<a href="#">link</a>
<code>ax.set(xlim=[0, 7], ylim=[-0.5, 9])</code> <code>ax.set_xlim(0, 7)</code>	Sets limits	<a href="#">link</a> <a href="#">link</a>
<code>plt.margins(x=1.0, y=1.0)</code>	Set margins: add padding to a plot, values 0 - 1	
<code>plt.axis('equal')</code>	Set the aspect ratio of the plot to 1	

### Legends/Labels

Operator	Description	Documentation
<code>plt.title('just a title')</code>	Sets title of plot	<a href="#">link</a>
<code>plt.xlabel('x-axis')</code>	Sets label next to x-axis	<a href="#">link</a>
<code>plt.ylabel('y-axis')</code>	Sets label next to y-axis	<a href="#">link</a>
<code>ax.set(title='axis', ylabel='Y-Axis', xlabel='X-Axis')</code>	Set title and axis labels	<a href="#">link</a>

<code>ax.legend(loc='best')</code>	No overlapping plot elements	<a href="#">link</a>
------------------------------------	------------------------------	----------------------

### Ticks

Operator	Description	Documentation
<code>plt.xticks(x, labels, rotation='vertical')</code>	Set ticks, <a href="#">example</a>	<a href="#">link</a>
<code>ax.xaxis.set(ticks=range(1,5), ticklabels=[3,100,-12,"foo"])</code>	Set x-ticks	<a href="#">link</a>
<code>ax.tick_params(axis='y', direction='inout', length=10)</code>	Make y-ticks longer and go in and out	<a href="#">link</a>

## Examples

### Basics

```
import matplotlib.pyplot as plt

x = [1, 2.1, 0.4, 8.9, 7.1, 0.1, 3, 5.1, 6.1, 3.4, 2.9, 9]
y = [1, 3.4, 0.7, 1.3, 9, 0.4, 4, 1.9, 9, 0.3, 4.0, 2.9]
plt.scatter(x,y, color='red')

w = [0.1, 0.2, 0.4, 0.8, 1.6, 2.1, 2.5, 4, 6.5, 8, 10]
z = [0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10]
plt.plot(z, w, color='lightblue', linewidth=2)

c = [0,1,2,3,4, 5, 6, 7, 8, 9, 10]
plt.plot(c)

plt.ylabel('some numbers')
plt.xlabel('some more numbers')
plt.show()
```

```
import matplotlib.pyplot as plt
import numpy as np

x = np.random.rand(10)
y = np.random.rand(10)

plt.plot(x,y,'--', x**2, y**2,'-.')
plt.savefig('lines.png')
plt.show()
```

```
import matplotlib.pyplot as plt

x = [1, 2, 3, 4]
y = [1, 4, 9, 6]
labels = ['Frogs', 'Hogs', 'Bogs', 'Slogs']

plt.plot(x, y, 'ro')
# You can specify a rotation for the tick labels in degrees or with keyword
# s.
plt.xticks(x, labels, rotation='vertical')
# Pad margins so that markers don't get clipped by the axes
plt.margins(0.2)
plt.savefig('ticks.png')
plt.show()
```

## Subplotting Examples

```

import matplotlib.pyplot as plt

x = [0.5, 0.6, 0.8, 1.2, 2.0, 3.0]
y = [10, 15, 20, 25, 30, 35]
z = [1, 2, 3, 4]
w = [10, 20, 30, 40]

fig = plt.figure()
ax = fig.add_subplot(111)
ax.plot(x, y, color='lightblue', linewidth=3)
ax.scatter([2,3,4,4], [5,10,12, 15],
           color='black',
           marker='^')
ax.set_xlim(0, 6.5)

ax2 = fig.add_subplot(222)
ax2.plot(z, w, color='lightgreen', linewidth=3)
ax2.scatter([3,5,7], [5,15,25],
           color='red',
           marker='*')
ax2.set_xlim(1, 7.5)

plt.savefig('mediumpoint.png')
plt.show()

```

Thanks to this guy for this [good example](#)

```

import numpy as np
import matplotlib.pyplot as plt

# First way #

x = np.random.rand(10)
y = np.random.rand(10)

figure1 = plt.plot(x,y)

# Second way #

x1 = np.random.rand(10)
x2 = np.random.rand(10)
x3 = np.random.rand(10)
x4 = np.random.rand(10)
y1 = np.random.rand(10)
y2 = np.random.rand(10)
y3 = np.random.rand(10)
y4 = np.random.rand(10)

figure2, ((ax1, ax2), (ax3, ax4)) = plt.subplots(2, 2)
ax1.plot(x1,y1)
ax2.plot(x2,y2)
ax3.plot(x3,y3)
ax4.plot(x4,y4)

plt.show()

```

If you haven't used NumPy before, check out my [cheat sheet](#)

```
import numpy as np
import matplotlib.pyplot as plt

x = np.linspace(0, 1, 500)
y = np.sin(4 * np.pi * x) * np.exp(-5 * x)

fig, ax = plt.subplots()

ax.fill(x, y, color='lightblue')
plt.show()
```

[source](#)

## Advanced

Taken from [official docs](#)

```

import matplotlib.pyplot as plt
import numpy as np

np.random.seed(0)

x, y = np.random.randn(2, 100)
fig = plt.figure()
ax1 = fig.add_subplot(211)
ax1.xcorr(x, y, usevlines=True, maxlags=50, normed=True, lw=2)
ax1.grid(True)
ax1.axhline(0, color='black', lw=2)

ax2 = fig.add_subplot(212, sharex=ax1)
ax2.acorr(x, usevlines=True, normed=True, maxlags=50, lw=2)
ax2.grid(True)
ax2.axhline(0, color='black', lw=2)

plt.show()

```
